I. INTRODUCTION	5
A. Strategic Planning.....	6
B. Vendor and product selection.....	9
1. Pick some preferred products.....	10
a) Functionality.....	10
b) Implementation time and complexity.....	11
2. Validate the product selections	14
3. Financial Considerations.....	15
C. Methodology.....	15
II. COMPUTERIZED PHYSICIAN ORDER ENTRY (CPOE)	21
A. Orders.....	21
1. Order Entry Process.....	21
a) patient selection via:	21
b) Review of previous orders	22
c) Orders are accepted via two-way interface by ancillary system (lab, pharmacy, radiology)	22
d) * Modification of components of old order cancels old and creates a new one.....	23
e) *Medication order should update MAR without pharmacist verification.....	23
f) Display relevant information while creating new orders.....	24
g) *Personalization: preferences, most commonly ordered	25
h) Recommended doses based on.....	25
i) *Prompting for corollary orders.....	25
j) Templates specify defaults for most common values and separate “nursing” fields (timing, transportation, oxygen) from MD issues.....	26
k) Nursing notification of new orders.....	26
l) * Ancillary orders within Order sets include default values and future dates....	26
m) Order sets by diagnosis	27
n) Compound, conditional orders	27
o) TPN ordering	28
p) Patient-controlled anesthesia order template.....	28
q) Verbal order handling	28
r) Counter-signing of student orders.....	28
s) Electronic counter-signature by orderable item.....	28
t) Suspended pending event.....	28
u) Expeditious processing of rules	29
2. Order scrutiny within ordering process i.e. is an order appropriate.....	29
a) Drug-lab alerts	29
b) *Check for allergies.....	29
c) *Check for drug-drug interactions	29
d) *Selectively control drug-drug interaction alerts	29
e) Drug-disease interaction checking	30
f) Therapeutic duplication within drug class.....	30

g)	Therapeutic duplication for each component of a combination product.....	30
h)	IV incompatibility checking.....	30
i)	Drug interactions updated at least quarterly by vendor	30
j)	When ordering iv contrast, check renal function or urine volume	30
k)	Redundant utilization checking.....	30
l)	Alternative therapy suggestions	31
m)	Parameter checking for over/under dosing based on:	31
n)	Cumulative dose limit checking.....	31
B.	Alerts	31
1.	Rule editor:	31
a)	*Skill level needed to create alerts.....	31
b)	*Control over firing individual rules.....	31
c)	Control over triggering limits of individual rules.....	32
2.	*Vendor supplies comprehensive clinical content	32
3.	Alerts available from other users at nominal cost and effort	32
4.	* Data-driven alerts.....	32
5.	Time-driven alerts.....	32
6.	Notification methods	32
7.	Exception documentation for alert overrides	33
8.	Actions appropriate to alert within screen flow.....	33
a)	Consequential orders i.e. based on alert, place most likely appropriate order ...	33
9.	Escalation process and criteria	33
10.	Results review enables messaging	33
III.	COMPUTERIZED PHYSICIAN ORDER ENTRY SUMMARY SCORES ..	34
IV.	COMPUTERIZED PHYSICIAN ORDER ENTRY SCORES	40
V.	MEDICATION ADMINISTRATION.....	59
A.	Administration	59
1.	Patient selection by:.....	59
a)	Assignments	59
b)	Floor census.....	59
c)	Name	59
d)	Barcode.....	59
2.	Bar code identification of:	59
a)	Patient.....	59
b)	Medication.....	60
3.	Verification by nurse, pharmacist	60
4.	*Next dose due is obvious without scrolling.....	60
5.	Trade and generic names display	60
6.	*Dosage formulation is specified(e.g. two 50 mg tabs)	60
7.	Sliding scale doses are evident.....	61
8.	*Medication allergies display on work list.....	61
9.	Medication profile available	61
a)	separates active and inactive medications	61
10.	MAR allows easy identification of:	61

a)	time of last dose	61
b)	total dose/ previous day	61
c)	omitted doses	61
11.	Batch charting	62
12.	“Not given” reasons	62
13.	Re-schedule future administration	62
a)	*next dose	62
b)	all subsequent doses	62
14.	Late administration reasons	62
15.	*Capture clinical observations/vital signs appropriate to medication	62
16.	*Display germane labs or clinical observations appropriate to medication	62
17.	*Provisions for administration of emergency medications from floor stock	63
18.	Emergency medications are checked for allergies, interactions	63
B.	Alerting.....	63
1.	*Abnormal lab results can trigger “don’t give” messages.....	63
C.	IVs.....	63
1.	*IV piggybacks.....	63
2.	*IV infusions	63
3.	IV volumes added to I&O record.....	64
4.	End of bag volume reconciliation	64
5.	Interface to infusion pumps	64
6.	*Both dose-rates and volume-rates are supported	64
D.	Aggregate Reporting	64
1.	Patient dosing problems based on renal function, age, weight	64
2.	Missed doses.....	64
3.	Monitored medications	64
4.	Potential Adverse Drug Events	64
E.	Flowsheets	65
1.	*Time correlation of medication administration with clinical observations and labs 65	
2.	*Time correlation of iv infusion rates with clinical observations and labs.....	65
F.	Pharmacy system integration.....	65
1.	new orders appear on medication list.....	65
2.	medication administration updates pharmacy system fill list	65
3.	charge on administration.....	65
VI.	MEDICATION ADMINISTRATION SUMMARY SCORES	66
VII.	MEDICATION ADMINISTRATION SCORES.....	70
VIII.	BLANK EVALUATION TEMPLATES	82
IX.	VENDOR SPONSORED CASE STUDIES.....	90
